

Xpert Handset

Description:

The Xpert Handset is a remote control handset with 8 keys for the Xpert CNC Controller. It makes positioning easier whilst setting the zero point.

Due to the keys having multiple functions the spindle speed and the advance feed can be optimised during the milling process and at the same time the functions "Start milling", "Interrupt" and "Abort" can be executed.

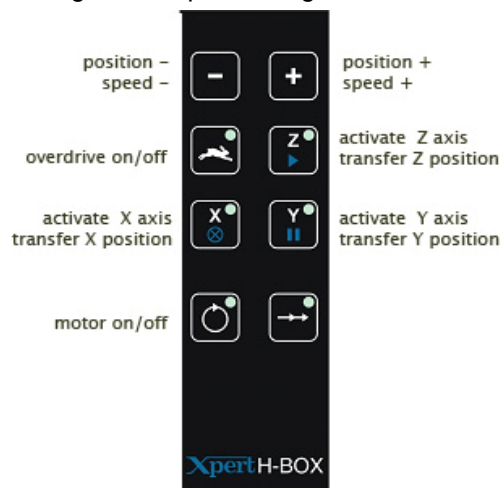

To enable the operator to see which function is activated, 6 keys are fitted with a display lamp.

The Xpert Handset comes in an attractive high quality, ergonomically shaped aluminium CFK cabinet. Rubber lips protect against sharp edges and provide grip on smooth surfaces.

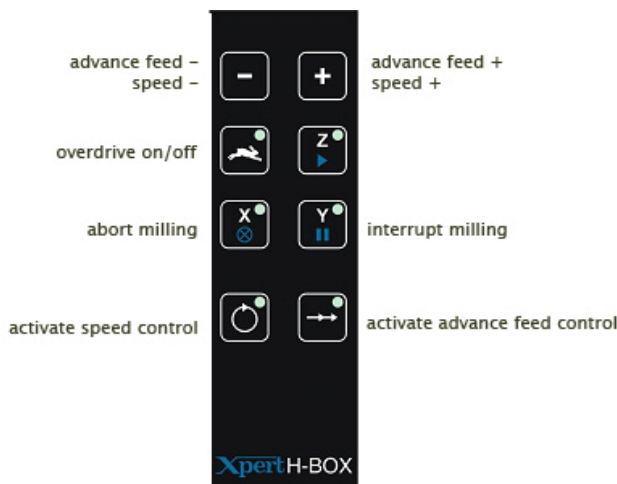

Dimensions: 135 x 60 x 34.5mm (LxWxH)

Key Assignment:

During manual positioning:

During milling:

While machine is in wait position:
